CS335_Milestone1

Group ID: 34

Rohan Ravi(210870), Narendra Singh(210649), Aryan Maurya (210202)

March 2024

Execution Instruction

- Make sure that `parser.y`, `lexer.l` and `Makefile` are in the same folder `src`. Navigate to the `src` folder and run the command: `make`

- The above command makes the output file `a.out`. As the code contain some debugging part also. So if you want to print those debugging statements while your input file is input.py and it is in the same directory as that of source files then run the command: `./final -f input.py --debug`

- In the above execution if you don't want to run the debugging statements then run the command: ./final -f input.py.

- To create the AST tree run this command: `dot -Tpdf AST.dot -o tree.pdf`
